- Small battery-powered devices that heat liquid containing chemicals to an aerosol that users breathe in
- Aerosol is being inhaled, NOT vapour or steam
- Come in many shapes and sizes may look like everyday products (e.g. pen, USB stick)
- Recent reports have found >200 unique chemicals in e-liquids
- May contain nicotine

E-cigarette use in Victoria

E-cigarette use and behaviours among Victorian adults in 2022

75%

purchased e-cigarette devices from bricks and mortar stores

222288888

54% of current e-cigarette users are aged under 30 years

E-cigarette use increased five-fold among young women aged 18-24 – from 2.8% in 2018-19 to 15.2% in 2022

Current e-cigarette use doubled among Victorian adults from an estimated 154,895 users in 2018-19 to 308,827 users in 2022

Estimated 77,200 never smokers currently vape

1/4

of all current e-cigarette users are never smokers 58% who used e-cigarettes in the past year usually vape nicotine

9% who used e-cigarettes with nicotine in the past year said they had a prescription from their doctor

Teen smoking and vaping in Australia

Health effects of vaping

Strong evidence

Addiction

Lung injury

Acute nicotine toxicity

Environmental waste, indoor air pollution

Emerging evidence

Impaired lung function

Poor cardiovascular health markers

- Vaping can exacerbate mental health concerns
- Current e-cigarette users have 2x the likelihood of having a diagnosis of depression, while frequent vaping has 2.4x the likelihood (Obisesan et al. 2019; JAMA Netw Open)
- Vaping is significantly associated with more ADHD symptoms (Bierhoff et al. 2019; Subst Use Misuse)
- Addiction

Health effects of vaping continued...

A lot of the negative health effects of vaping come from vaping itself (inhaling an aerosol containing flavouring chemicals, carrier liquids, particulate matter and possibly heavy metals), whether or not you are vaping nicotine.

Even if you are not vaping nicotine, you are still risking lung damage.

Key challenges

- Vaping is currently normalised amongst young people
- Devices, packaging and flavours are designed and marketed to appeal to children and young people
- Highly accessitble
- Tobacco and e-cigarette industry working hard to frame e-cigarettes as "less harmful" than cigarettes

Smoking and vaping legislation

- State legislation restricts sale of e-cigarette products
- Wherever smoking is regulated, vaping is included

NO SMOKING OR VAPING

Tobasso Ast 1997

Tobacco Act 1987

In May 2023, the Federal Government announced plans to:

- ban all single use, disposable vapes
- stop the import of non-prescription vapes
- increase the minimum quality standards for vapes
- require pharmaceutical-like packaging for vapes
- close down the sale of vapes in retail settings while also making it easier to get a prescription for legitimate therapeutic use

NO SMOKING OR VAPING

PENALTIES MAY APPLY

Tobacco Act 1987

Values based messaging

Teens who vape overestimate vaping prevalence

Keep pointing out that most young people and teens do not vape.

What do industrial, corrosive chemicals do to your lungs?

Young people who have not vaped before or do not vape regularly were particularly shocked and uncomfortable with the idea of breathing in corrosive chemicals. For this audience, a focus on the toxic chemicals in vapes has the potential to be a powerful deterrent.

Trusted adults' opinions matter

Influential adults need to repeatedly voice their disapproval of vaping with teens they have an established or close relationship with.

Tone & delivery of messages

Informative, story-driven content (from their peers) performed best and having the chance to make up their own mind was much preferred over being told what to do. Don't overstate the harms though, this reduces credibility. Simple is best.

Mental health is important

Highlighting the relationship between vaping dependence and adverse mental health outcomes is credible to young people. For many, effects on mental health are more tangible, immediate and important than talking about the obscure long-term consequences of vaping on their physical health.

Chemicals, health harms, nicotine and addiction

Together, painted a picture of why vaping is 'bad for you'. Industry deception may also be effective.
